ASSEMBLY INSTRUCTIONS

Geo-Panel PVC panels can be fixed directly to the wall if the surface is relatively even and if the wall is dry, using panel adhesive, or fix on to a frame of wooden batons.

When fitting Geo-Panel PVC panels to the ceiling, always fix to a frame of wooden batons.

When fixing Geo-Panel PVC panels to wooden batons, the panels can be fixed through the extending backplate fixing tongue using staples with a staple gun, by hammer with the panel pins/nails, with screws, or with panel adhesive.

- When fixing to the ceiling, adhesive should not be used, unless as an additional fixing combined with staples, panel pins/nails, or screws.

- To make a wooden frame, strap the wall with wooden batons placed approximately every 30-40cm according to the direction of assembly. If the panels are assembled vertically, strap in the opposite direction horizontally, and vice-versa. It panels are assembled diagonally, the batons can be installed vertically, horizontally or at right angles to the panels.

- Start with the preferred end moulding - end cap U, internal, external, or scotia.

- Glue the panel, or panel-pin (nail), staple or screw the first panel through the backplate fixing tongue opposite the starting side.

- Insert the tongue of the next panel into the groove and continue the installation of the panels in the same manner.

- Use appropriate PVC trims to finish all corners and ends.

- DECORATIVE CLIP-IN SILVER STRIP (8mm wide): If a decorative clip-in silver strip is to be used, clip this into the groove before inserting the second and subsequent panels, then glue the panel, or panel-in (nail), staple or screw through the panel backplate fixing tongue.

- DECORATIVE H JOINT STRIP (20mm wide): If a decorative H joint is used, insert the H joint before fixing the backplate of the first panel and before inserting the second and subsequent panels. Glue the first panel and H Joint, or panel-pin (nail), staple or screw through the H Joint backplace fixing tongue to fix both the H Joint and first panel. Before inserting the H joint, the panel tongues should first be trimmed off both sides of the panels.

- SEALING: Seal the panels with silicone sealant between panel joints and trims and all ends if the panels are to be installed in a wet area such as in a shower or around a bath.

- CUTTING: When cutting with a precision handsaw, cut with the decorative face of the panel upwards. When using an electric saw cut the panel with the decorative face of the panel downwards.

Geo-Panel PVC Panels can be fixed with:

Staples, panel pins, screws, panel adhesive

HOW TO FIT PVC PROFILES

PVC END CAP U TRIM
To start or end the assembly of the panels.
White (GET8UTWH)
Silver (GET8UTSI)

PVC EXTERNAL CORNER TRIM
To make an outside corner
White (GET8ECWH)
